Summary

DevOps and Cloud Platform Engineer with 3 years of experience building scalable, high-availability infrastructure on **AWS** and **Kubernetes**. Specializes in infrastructure as code (Terraform, Crossplane), CI/CD pipeline automation (Jenkins, GitHub Actions, Argo CD, SonarQube), and platform engineering across on-prem and public cloud environments. Delivered production EKS platforms, custom **Kubernetes Operators** in Golang, and Python-based automation tooling. Certified in **Kubernetes (CKAD, KCNA)** and **Terraform**. Active open source contributor serving as **Kubernetes Release Docs Lead for v1.37**.

Experience

Cloud Platform Engineer — Engineer I, FICO (Fair Isaac Corporation) June 2024 – present

- **Reduced CI/CD pipeline job startup latency by 80%** by optimizing GitHub self-hosted runners on Kubernetes (EKS) using EC2 Warm Pools and cluster-local image pre-fetching, cutting EC2 startup time by **75% (4 to 1 min)** and image fetch time by **~83% (60 to 10 sec)**, improving developer velocity across large-scale build environments
- **Increased CI/CD runner capacity 2.5x (270 to 700 pods)** with zero additional infrastructure cost by re-engineering AWS VPC CNI IP allocation and networking configuration across **8 Kubernetes (EKS) environments**, reclaiming **72%** wasted IPs
- **Developed a Golang-based Kubernetes Operator for Crossplane** wrapping the Imperva WAF Terraform provider, enabling declarative infrastructure as code with **100%** automated drift reconciliation and enforcing security standards across cloud platform environments
- **Saved 1300+ manual hours annually** and prevented SCIM license over-provisioning by developing Python automation that syncs Okta groups to Atlassian (Jira, Confluence), Backstage, and other platforms, reducing access provisioning time by **95%**, demonstrating a strong instinct to automate repetitive operational tasks at scale

Cloud Platform Engineer — Intern, FICO (Fair Isaac Corporation) May 2023 – June 2024

- **Led zero-downtime migration of 400TB JFrog Artifactory** from shared to dedicated VPC by analyzing inbound flow logs across **100+** AWS accounts, developing a custom Python network topology mapper to reconstruct network paths, validate DNS and load balancer connectivity across environments
- **Reduced policy-related deployment failures by 70%** by building a Python CI/CD validation pipeline that maps Crossplane resource dependencies, renders infrastructure as code changes, and validates them against Kyverno policies in pull request checks, integrating security standards enforcement directly into the software delivery lifecycle
- **Transformed organization's compliance approach** by leading policy-as-code strategy evaluation (Kyverno vs. OPA), documenting ADRs, and driving adoption across all platform teams

Awards

- **Extraordinary Impact Award** (top 5% company-wide) & **13 Spot Awards** at FICO (Fair Isaac Corporation)

Open Source and Community

Kubernetes (SIG Release)

- Release Team Contributor: **Docs lead** for v1.37 release cycle and **Docs shadow** for v1.35 and v1.36 release cycles
- Contributed to the official Kubernetes release tooling — [automated release note regeneration](#) and [CI pipeline enhancements](#)

PyCon India 2025 — Speaker: Making Sense of Big Codebases (DeepWiki & Crabviz)

Certifications

- **Kubernetes:** [CKAD](#), [KCNA](#) | **Terraform:** [Associate](#) | **GitHub:** [Foundations](#)

Technical Skills

Programming: Python, Go, Bash

Cloud Platforms: AWS (EC2, EKS, ECS, S3, RDS, VPC, ALB/NLB, IAM, KMS, SQS, SNS, EventBridge, CloudWatch, ECR)

Containers & Infrastructure: Kubernetes, Kubebuilder, Docker, Helm, Crossplane, Terraform, Istio, Linux

CI/CD & Automation: GitHub Actions, Jenkins, Argo CD, SonarQube, Artifactory

Observability & Policy: Prometheus, Grafana, Splunk, OpenTelemetry, Kyverno

Education

Chitkara University, BE in Computer Science | CGPA: 9.87/10.00 (Top 5%)

May 2024
